About me

· First time I had contact with web development was almost two years ago, when I was planning to run an e-commerce business. I've realized very quick using build-in store creators and CMS services I couldn't add to my store some of features I wanted to, so I've started to learn HTML and CSS to be able to do it by myself. Soon after I've learned some basics, I've started with javascript and it hooked me into really fast. Since that time I knew programming is something I'd like to do professionally and it has become a full-fledged passion that only gets more exciting with time. I'm looking for a job that will let me improve my skills with creating high-quality software and learn new things everyday. Below you'll find a few projects I've created that showcase my skills and the general technology background I've used

Experience

Network App @ https://github.com/marek3289/network-app

· Network-App is forum application, created using React, Redux and Firebase. This app enables you to create new account and have own profile, which you can update with bio, location and profile picture. On your profile you can also find posts you recently added. As a user you are able to adding or deleting threads and comments. Threads are divided into three categories - forum, updates, jobs - depends on what you'd like to add. Each category you can filter by tags or text in search bar, and in case there are too many posts on specific page, pagination make it easy for you to navigate the website.

Sneakers Store E-Commerce @ https://github.com/marek3289/sneaker-store-ecommerce

· Sneaker-Store-Ecommerce is an ecommerce app created with Gatsby. When you enter the website, you can view items, and buy them through Stripe. To mantain cart I used custom hook use-shopping-cart. In cart you can finalize your order using checkout button, which redirect you to Stripe checkout.

Twitter Feed Clone @ https://github.com/marek3289/twitter-feed-clone

· This is a small social media application inspirated by twitter. Technologies I've used to create this app was React and Firebase. It has feed with infinited scroll created with javascript intersection observer. As a user you can add your own tweets and delete them. You can also create your own account and set your name and profile picture.

Pokemon App @ https://github.com/marek3289/react-pokemon-app

· My first application I've created in React and posted on github. This app is getting data using axios and showing for user list of pokemons. Each of pokemon has his own card. You can click on that card if you'd like to see some details about his skills and description

Skills

Programming Languages:

JavaScript (ES6), HTML, CSS/Sass, GraphQL

Frameworks & Libraries:

React (Redux), Gatsby

Tools & Platforms:

Git, Firebase, DatoCMS

Languages:

Polish (Native)

English (B1- B2)

Education

Liceum Ogólnokrztałcące nr. 6

2014 - 2017 // Olsztyn

Interests

Traveling, reading, running, basketball, mma
